DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a method of stimulating hematopoiesis, classified in class 424, subclass 192.1.
- II. Claims 10-13, drawn to gene therapy, classified in class 424, subclass 93.21.
- III. Claims 14-17, drawn to a method of producing dendritic cells, classified in class 424, subclass 192.1.
- IV. Claims 18-35, as they are drawn to a method of treating a tumor, classified in class 424, subclass 192.1.
- V. Claims 22-35, as they are drawn to a method of treating an autoimmune disease, classified in class 424, subclass 192.1.
- VI. Claims 22-35, as they are drawn to a method of treating infection, classified in class 424, subclass 192.1.

The inventions are distinct, each from the other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for inventive groups that are directed to different methods, restriction is deemed to be proper because these methods appear to constitute patentably distinct inventions for the following reasons:

Inventions I and III-VI are methods of using a common product. It is noted that the product itself has been patented, and that this application is a divisional of that patent. Thus, the product has been determined by the Board of Appeals and Interferences to be novel and non-obvious. However, each of the methods requires separate search to determine enablement of the

Art Unit: 1647

particular method being claimed; a search for stimulation of hematopoiesis would not reveal art as to treatment of infection or tumors, for example. As the conditions being treated or effects to be achieved by the different methods are substantively different and require separate search, said search being burdensome, restriction is proper.

Inventions I and III-VI are each distinct from Invention II. The methods of Invention II require a distinct product, nucleic acids, from that required for the other inventions, involve different method steps (administration of nucleic acids vs. administration of protein) and function differently (*in vivo* expression vs. administration of protein). Further, the search required to determine enablement of gene therapy is completely separate from that required for administration of a protein. Accordingly, examination of Invention II with any of the other Inventions would require a burdensome search, and restriction is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
